

Assignment 2

1. Constructing architecture of the system

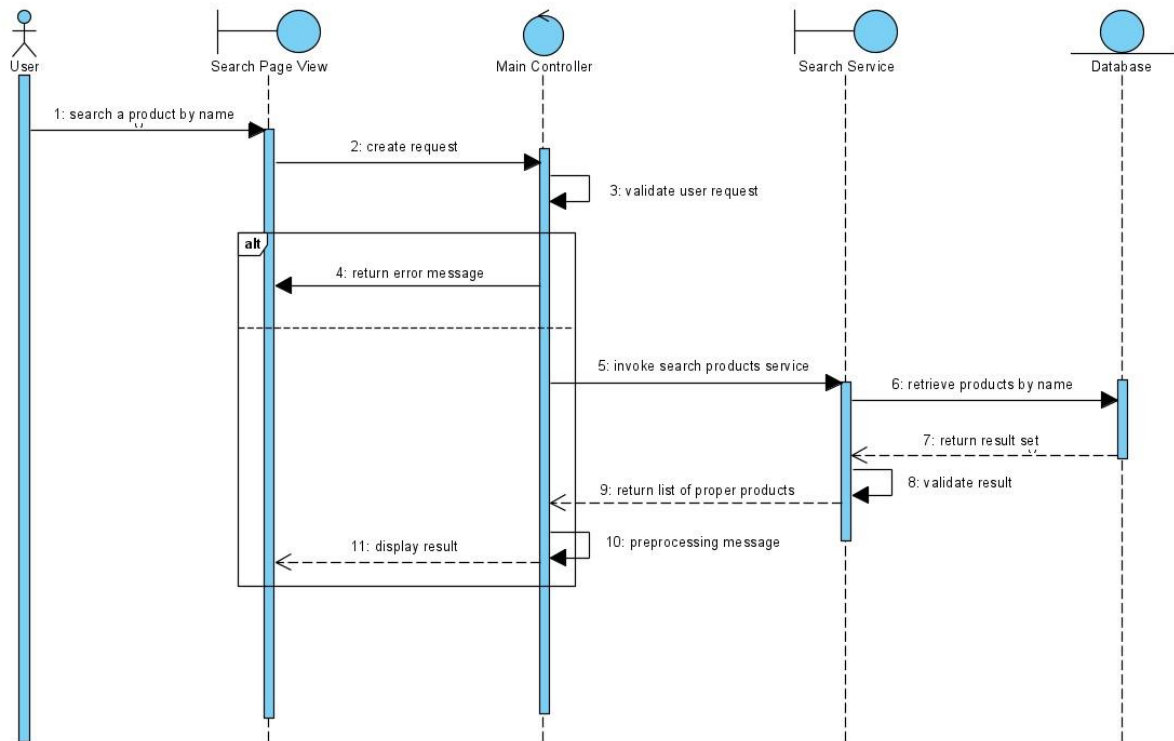

2. Constructing activity diagrams

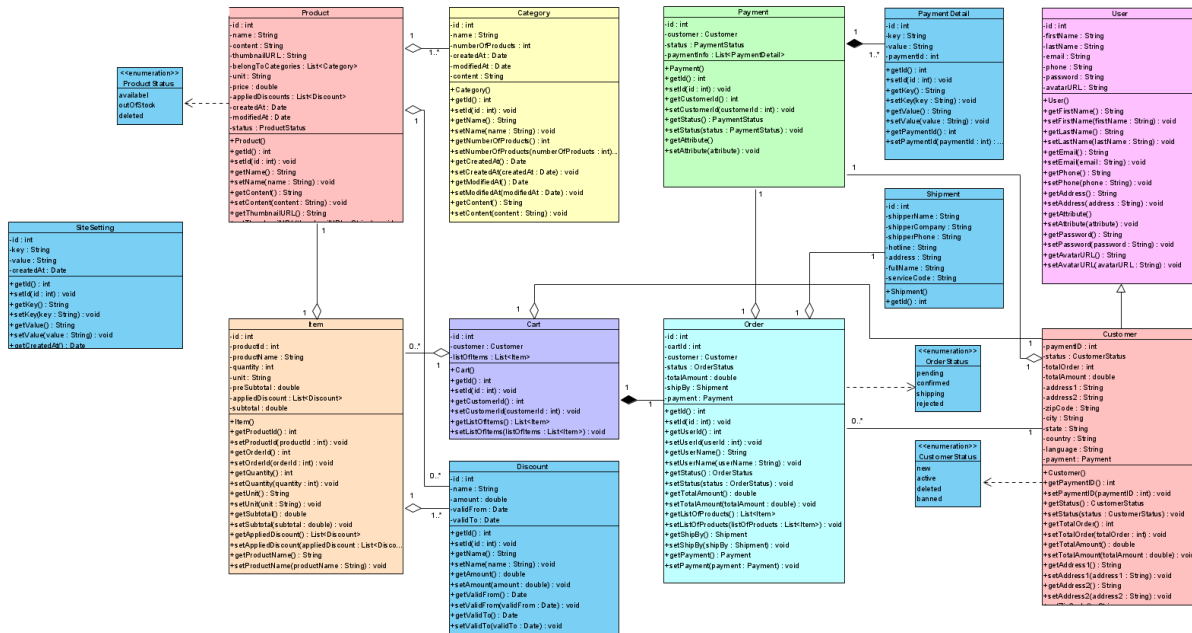

3. Constructing sequence diagrams

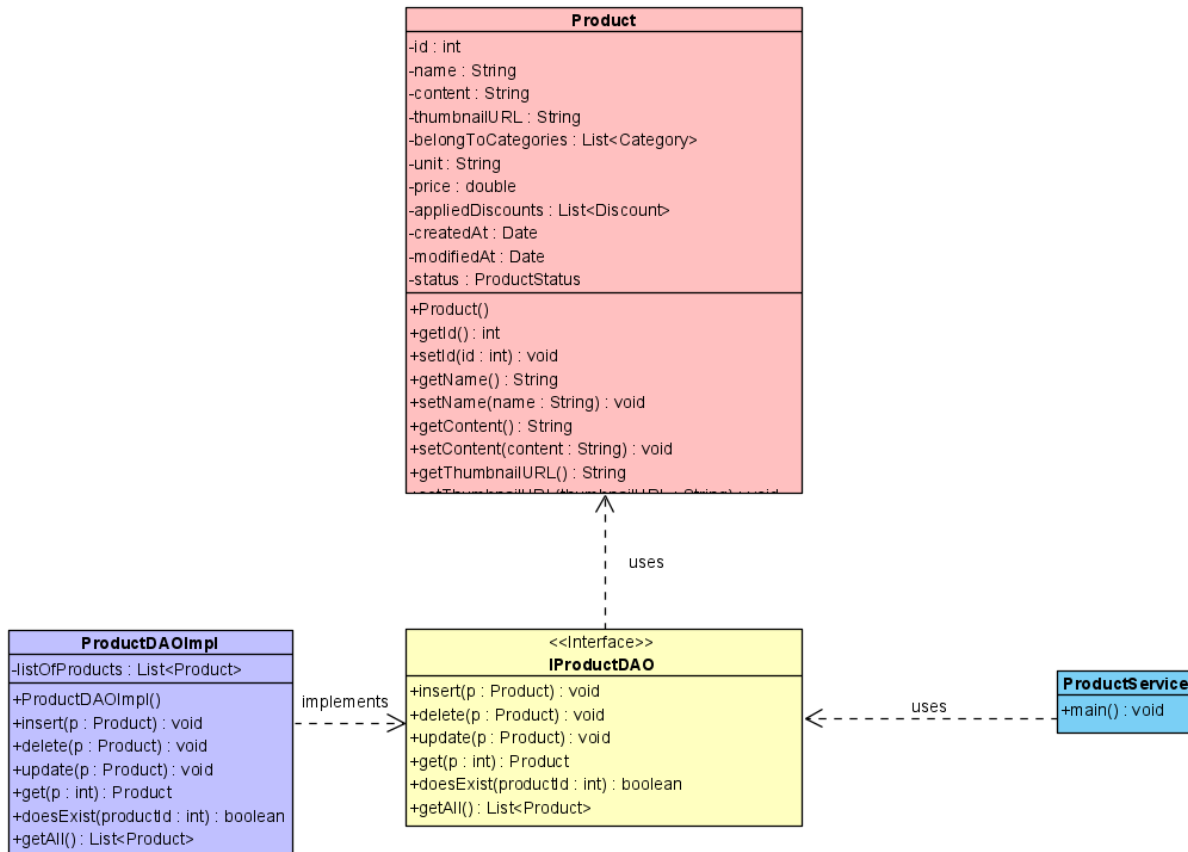

sd 3.SequenceDiagram-UserSearch

4. Constructing class diagram

5. Using pattern DAO for designing classes

6. Coding some class with pattern

```
package DataAccessLayer.DataAccessObject;
```

```
public interface IProductDAO {
```

```
    /**
     *
     * @param p
     */
    void insert(Product p);

    /**
```

```

    *
    * @param p
    */
    void delete(Product p);

    /**
     *
     * @param p
     */
    void update(Product p);

    /**
     *
     * @param p
     */
    Product get(int p);

    /**
     *
     * @param productId
     */
    boolean doesExist(int productId);

    List<Product> getAll();
}

```

```

package DataAccessLayer.DataAccessObject;

public class ProductDAOImpl {

    private List<Product> listOfProducts;

    public ProductDAOImpl() {
        // TODO - implement ProductDAOImpl.ProductDAOImpl
        throw new UnsupportedOperationException();
    }

    /**
     *
     * @param p
     */
    public void insert(Product p) {

```

```

        // TODO - implement ProductDAOImpl.insert
        throw new UnsupportedOperationException();
    }

    /**
     *
     * @param p
     */
    public void delete(Product p) {
        // TODO - implement ProductDAOImpl.delete
        throw new UnsupportedOperationException();
    }

    /**
     *
     * @param p
     */
    public void update(Product p) {
        // TODO - implement ProductDAOImpl.update
        throw new UnsupportedOperationException();
    }

    /**
     *
     * @param p
     */
    public Product get(int p) {
        // TODO - implement ProductDAOImpl.get
        throw new UnsupportedOperationException();
    }

    /**
     *
     * @param productId
     */
    public boolean doesExist(int productId) {
        // TODO - implement ProductDAOImpl.doesExist
        throw new UnsupportedOperationException();
    }

    public List<Product> getAll() {
        // TODO - implement ProductDAOImpl.getAll
        throw new UnsupportedOperationException();
    }
}

```

```
package DataAccessLayer.DataAccessObject;

public class ProductService {

    public void main() {
        // TODO - implement ProductService.main
        throw new UnsupportedOperationException();
    }

}
```
